# TREDPLAN – Predictive Analysis for Long-Range Planning

## Client

Subscription: state and regional planning agencies

## Facts

| | |
|---|---|
| Period | 2020 |
| Project Country | United States |

TREDPLAN is a web-based tool developed by EBP's TREDIS Software Division, for state and regional planning agencies to evaluate the long-term risks and opportunities associated with future change – including ongoing evolutionary changes (e.g., demographic and economic development trends), disruptive and hard-to-anticipate changes (e.g., foreign trade policies, climate and weather factors and new technology adoption) and policy interventions (e.g., public infrastructure investment options).
